Log In

Why Error Reporting?

App Environments

Development

Where developers code and debug

Stage

Where testers test and send feedback

Production

Where client uses with the app

Catching errors and fixing them before your customers notice, will boost user experience and build strong trust in your app

Overview

Handling errors in Flutter

- Dart VM
- Flutter framework
- Native

Capturing errors

- Using Sentry
- Using Firebase Crashlytics

Understanding Errors in Flutter

Understanding Errors in Flutter

Errors in Flutter

Dart VM

Flutter Framework

Native code

Errors

Caught

Using try/catch block

Uncaught

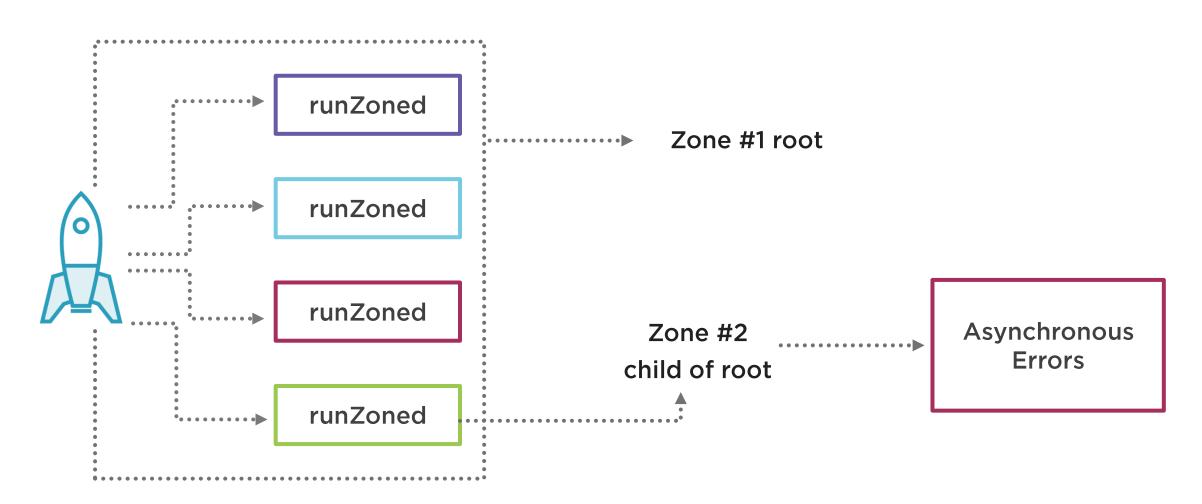

Exceptions occur anytime

Capture Dart Errors

Dart Zone

Demo

Exceptions in Wired Brain Coffee app

Run the app in custom zone

How to capture Dart errors

How to treat errors in

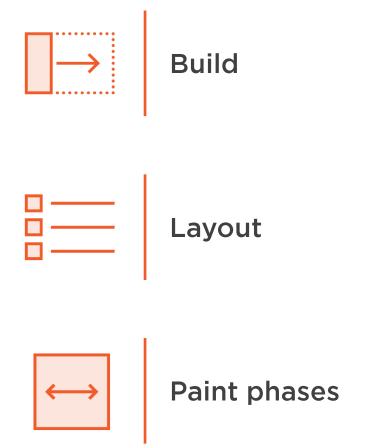

- Development
- Production

Capture Flutter Errors

Flutter Framework Errors

Demo

Layout issue in Wired Brain Coffee app

How to capture these errors

How to treat errors in

- Development
- Production

Report Errors to Sentry

Demo

Create a project in Sentry

Setup Sentry in the app

Capture errors and send to Sentry

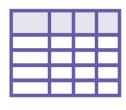

Additional Information to Sentry

Additional Information

Device type

Build number

Operation system

Device name

Release version

Model

Demo

Create custom Sentry event

Add DeviceInfo and PackageInfo

Add extra information for

- iOS
- Android

Read the extra information in Sentry

Report Errors to Firebase Crashlytics

Demo

Setup Firebase account

Add Firebase Core and Crashlytics

Capture errors

Report crashes to Firebase Crashlytics

Read errors in Firebase Crashlytics

Summary

Summary

Handling uncaught errors in Flutter

- Dart errors
- Flutter framework errors

Capturing errors

Send errors to Crashlytics and Sentry

- Added additional information
